

Postdoctoral Fellowship – Potato Virology/Physiology

Location: Fredericton, New Brunswick

The Insect Physiology Laboratory of the Agriculture and Agri-Food Canada Potato Research Centre has a postdoctoral position available in the area of potato virology or plant physiology. The candidate would join a multi-disciplinary research group interested in the transmission and control of the Potato Virus Y. The specific mandate of the candidate would be to study the interaction between the virus and the plant in situation where mineral oil is used as control method. The candidate will interact with entomologists, plant pathologists, biochemists, and plant physiologists to develop new studies.

Duration: January 2012 to March 2013

Eligibility: The candidate has to be enrolled or admissible to the NSERC Visiting Fellowship Program
