## **ERRATUM**

### **Volume 65: 1, 1985**

Page 16

The last paragraph should read:

The existence of a significant negative correlation between numbers of root lesion nematodes and the presence of common root rot in the cultivar Bruce did not indicate that the two groups of organisms were antagonistic to each other. Furthermore, the positive correlation between numbers of stunt nematodes and the incidence of common root rot did not confirm a synergistic interaction. More information is necessary, especially in the spring when host plants are at the seedling stage to further characterize the relationship between such disease inciting organisms. In addition, accurate identifications of fungal and nematode species must be completed.
