

Phenological Data - 1946

The data in the main table were compiled by M.W. Cormack at Edmonton, R.C. Russell at Saskatoon, and B. Peterson at Winnipeg. The second column under each locality shows the departure from average in days.

The season opened very early at Saskatoon and Winnipeg, but by the end of May frosts and cool weather had reduced development to about the average. At Edmonton, the spring opened somewhat early but lagged slightly in mid-May. Several spring frosts injured blossom buds and leaves at Winnipeg, and to a lesser extent at Saskatoon; consequently records were not available for some regularly observed species (R.C. Russell).

Cereal rusts were first observed in Man. as follows:

Puccinia triticina	23/6
P. coronata	18/7
P. graminis Triticifolii	15/7
P. graminis Avenae	18/7
P. Hordei	18/7

(B. Peterson).

Anthesis dates at Ottawa, with number of days departure from average, for 9 plants from the main list were as follows:

Populus tremuloides	29/3	16E	Anemone canadensis	8/6	4L
Acer Negundo	21/4	4E	Bromus inermis	19/6	11L
Viola canadensis	2/5	1L	Phleum pratense	28/6	3L
Prunus pennsylvanica	17/5	6L	Solidago canadensis	6/8	10L
Smilacina stellata	20/5	2L			

Anthesis dates for marker trees at Ottawa compared with previous years:

	<u>10-yr. average</u>	<u>1944</u>	<u>1945</u>	<u>1946</u>
Acer saccharinum	14/4	17/4	25/3	21/3
Ulmus americana	27/4	30/4	3/4	7/4
Acer saccharum	8/5	6/5	14/4	8/5
Pinus sylvestris	27/5	24/5	27/5	1/6

The flowering season at Ottawa opened about 24 days ahead of average. This advance was gradually lost, however, and the season was close to the average by 1 May; it was several days behind average during most of May and a lag of 5-10 days persisted through June and most of July (W.H. Minshall).

SUMMARY OF PHENOLOGICAL DATA TAKEN AT
WINNIPEG, SASKATOON, AND EDMONTON, IN 1945

	Winnipeg		Saskatoon		Edmonton	
<i>Pulsatilla Ludoviciana</i>	9/4	?	5/4	10E	---	---
<i>Populus tremuloides</i>	14/4	11E	10/4	12E	18/4	4E
